TWO WAYS TO INCREASE PLASMA VOLUME

A. Raise P_E at fixed W_n

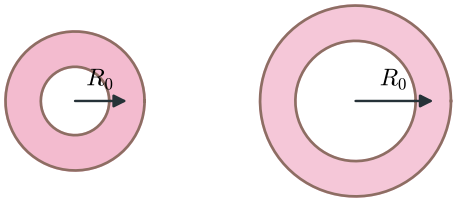

$R_0,\ V,\ P_E:\ \times 1.50$

$p, n:\ \times 1.00$

Same pressure; larger total output.

B. Lower W_n at fixed P_E

$R_0,\ V:\ \times 1.50$

$W_n:\ \times 0.67;\quad p, n:\ \times 0.82$

Same output; lower power density.

Fixed minor radius, elongation, temperature and profiles. Plan views; shading represents pressure.
