

Stage 13 — the earned nuclear island

the neutron that left at stage 10 has to stop somewhere: first wall, blanket, shield. Their total thickness is b .

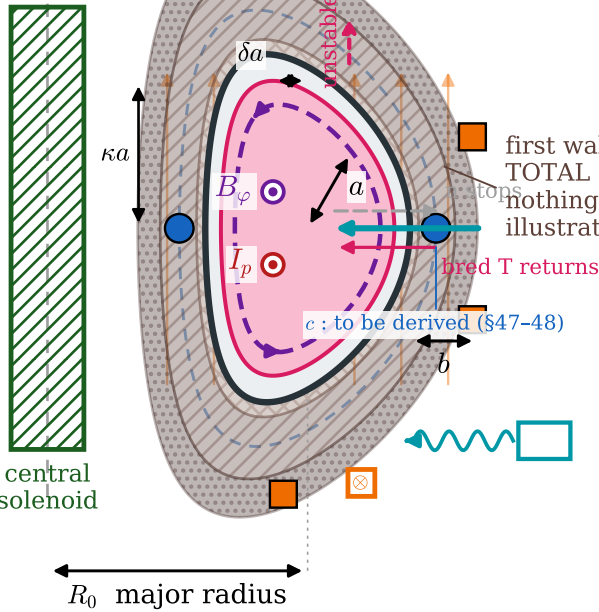

perspective view (vessel cut open)

- | | |
|--|---|
|  vacuum vessel (chamber wall) |  poloidal-field (PF) coils |
|  plasma / fuel region |  magnetic field B |
|  toroidal-field (TF) coils |  plasma current I_p |
|  central solenoid (CS) |  auxiliary heating ports |

symmetry axis

poloidal cross-section (R - Z plane)

first wall / blanket / shield. The text derives the TOTAL b from the neutron mean free path and says nothing about the split, so the split drawn here is illustrative. One neutron deposits; one bred triton returns.

bred T returns

c : to be derived (§47-48)
