Stage 3 — the tokamak field: a central solenoid drives I_p

the plasma's own current supplies B_θ, so field lines become helical

perspective view (vessel cut open)

vacuum vessel (chamber wall)
plasma / fuel region
toroidal-field (TF) coils
central solenoid (CS)
magnetic field **B**
plasma current I_p

⊙ : the vector points out of the page

Idealized schematic; not a fabrication drawing.
$R_0/a = 3.0$, $\kappa = 1.00$, $\delta = 0.00$, 12 of 12 TF coils in the 3-D panel; all geometry computed by tokamak_build.py.
