

Stage 6 — the boundary is elongated ($\kappa > 1$)

a taller cross-section buys area, hence I_p at fixed q_* ; the coil set follows the same boundary

perspective view (vessel cut open)

- | | | | |
|---|------------------------------|---|---------------------------|
|  | vacuum vessel (chamber wall) |  | poloidal-field (PF) coils |
|  | plasma / fuel region |  | magnetic field B |
|  | toroidal-field (TF) coils |  | plasma current I_p |
|  | central solenoid (CS) |  | auxiliary heating ports |

$\odot$: the vector points out of the page

Idealized schematic; not a fabrication drawing.

$R_0/a=3.0$, $\kappa=1.70$, $\delta=0.00$, 6 of 12 TF coils in the 3-D panel; all geometry computed by tokamak build.py.
